

SANIYA PATEL

Data Analyst · Backend Developer

Surat, Gujarat, India · digitalsaniyapatel@gmail.com · [linkedin.com/in/digitalsaniyapatel](https://www.linkedin.com/in/digitalsaniyapatel) · github.com/SaniyaDigiTech

PROFILE

Data Analyst and Backend Developer with hands-on expertise in Python, SQL, Flask, and PostgreSQL. Adept at extracting insight from complex, multi-domain datasets spanning healthcare, banking, sports, and telemetry. Experienced in architecting data pipelines, designing RESTful APIs, and translating raw data into decisions that move the needle. Hackathon-winning builder of a deployed AI product — with a sharp eye for practical impact over theoretical elegance.

TECHNICAL SKILLS

Programming	Python
Libraries	Pandas, NumPy, Matplotlib
Databases	PostgreSQL, SQL (JOINS, GROUP BY, Aggregations, Subqueries)
Backend	Flask · REST API Development
Tools	Excel (Advanced) · Git · Version Control
Analytics	Data Cleaning · EDA · Data Visualization · KPI Reporting
Domains	Healthcare Analytics · Financial Analysis · Sports Analytics · Time-Series / Telemetry

EXPERIENCE

Data Analyst / Backend Developer | Self-Directed Project Portfolio

Engineering & Development

- Architected a full-stack application with Flask and PostgreSQL handling end-to-end data ingestion, transformation, and structured reporting.
- Designed and exposed RESTful APIs to enable clean, reliable communication between frontend interfaces and backend data layers.
- Built robust data cleaning and feature engineering pipelines in Pandas and NumPy, raising dataset integrity and accelerating downstream analysis.
- Developed Matplotlib visualizations surfacing key trends, anomalies, and performance signals for informed decision-making.
- Authored optimized SQL using complex JOINS, window functions, and aggregations against normalized relational schemas.

Domain Analytics

- Healthcare: Examined patient-level clinical records — BMI classifications, blood pressure staging, medication costs, and satisfaction metrics — to surface operational insights.
- Banking & Finance: Mapped customer transaction behavior, executed segmentation analysis, and identified financial patterns across high-value and at-risk cohorts.

- ▶ Sports: Modelled player performance data and built comparative dashboards to support evidence-based coaching and scouting.
- ▶ Telemetry / IoT: Applied time-series techniques and anomaly detection on live sensor streams to flag performance degradation and operational irregularities.
- ▶ Constructed advanced Excel dashboards with conditional formatting and KPI tracking frameworks for use by non-technical stakeholders.

PROJECTS

Healthcare Data Analysis & Reporting System · *Python · SQL · Excel*

- ▶ Built a structured patient dataset covering demographics, clinical metrics, and insurance categories, with automated classification logic for BMI levels and blood pressure risk stages.
- ▶ Derived multi-dimensional insights on patient trends, follow-up compliance, and satisfaction scores to sharpen resource allocation and care pathway design.
- ▶ Delivered an Excel reporting suite with conditional formatting and KPI tracking, equipping non-technical teams with self-serve performance visibility.

ACHIEVEMENTS

Hackathon Winner — PredictaShelf: Smart Food Scanner AI

- ▶ Engineered an AI-powered inventory management system to cut food waste and automate shelf lifecycle tracking — conceived, built, and shipped within a competitive hackathon timeline.
- ▶ Implemented expiry date prediction, freshness classification, and intelligent recipe suggestion on a Flask + PostgreSQL backend.
- ▶ Embedded multi-language support (English, Hindi, Gujarati) to maximize real-world accessibility and adoption reach.
- ▶ Awarded first place by judges for technical depth, originality, and demonstrable real-world utility.

EDUCATION

Bachelor of Science in Information Technology (B.Sc. IT)

Shree Ramkrishna Institute of Computer Education and Applied Sciences
Athwagate, Surat, Gujarat, India

Currently in 3rd Year

ABOUT

- ▶ Deeply engaged with Data Science, AI, and Business Intelligence — building expertise through applied, project-driven work rather than coursework alone.
- ▶ Comfortable with ambiguity; skilled at shaping raw, messy datasets into structured outputs under real deadlines across diverse industry contexts.
- ▶ Available for remote and on-site roles; eager to contribute to high-output, data-forward teams from day one.
